DETAILED ACTION

Drawings

1. The drawings were received on October 25, 2006. These drawings are accepted.

Allowable Subject Matter

2. Claims 1-11 allowed.
3. The following is an examiner's statement of reasons for allowance:

Claims 1-10 are allowed because none of the prior art of record discloses or suggests the first and second constant voltage generators having identical circuit topologies, in combination with the remaining claimed features.

Claim 11 is allowed because none of the prior art of record suggests at least one mode detector, a plurality of voltage detectors, a selector, two constant voltage generators, a voltage switch, and an internal power supply output unit, in combination with the remaining claimed features.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

4. Applicant's arguments, see Remarks, filed October 25, 2006, with respect to the objections and rejections of claims 1 and 2 have been fully considered and are persuasive. The objections and rejections of claims 1 and 2 have been withdrawn.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the selection of the first or second voltage generator is made according to the level of the external power supply and not according to the level of the internal power supply voltage) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). As to applicant's argument that there is no suggestion in the Kim reference that the two voltage generators output different voltages, there is such a suggestion because if they were not capable of outputting different voltages, the second voltage generator and the switch would not be necessary. However, as stated by Applicant, there is no disclosure or suggestion that the two voltage generators have identical topologies.
